

**Jughead
Crown 2**

Instructions

1. For a more durable crown glue both sheets to construction paper or card stock.
2. Use scissors to cut out crown segments **A**, **B**, and **C** along the black outlines.
3. Also use scissors to cut open the three slits on each side of **Crown A** (These will be used to adjust the crown's fit.). Also cut open the slit on one end of **Crown B**.
4. Next fold all tabs in along the dotted lines so they can fit into their corresponding slits.
5. Slide the right tab of **Crown C** into the slit on **Crown B**. Unfold the tab and tape in place.
6. Then insert the remaining tabs into one of the slits on each side of **Crown A** depending on your crown size. Unfold these tabs and tape in place.
7. Place on your head, and guess what? You're **Jughead!**
